QUALITY

Not all CBD is created equal! At MAGU, quality has the highest priority:

- Naturalness is important to us. Our cultivation gets by with as few chemicals as possible.
-
- Transparency is a matter of course for us: We have all our products tested by independent laboratories and publish the analysis certificates. This way we can guarantee that the legal THC value is not exceeded. We also have our products regularly tested for pesticide and heavy metal residues.
-
- We always offer our customers added value through maximum bioavailability of the products.
-
- Our own innovative technologies allow us to guarantee the highest quality of our products.

SUSTAINABILITY & REGIONALITY

Our goal in growing our plants is to promote sustainable cycles - in the spirit of permaculture.

We rely on the best Viennese high-spring water, organic soil, natural fertilizers, microorganisms, natural plant strengtheners such as field horsetail extract and the use of beneficial insects such as the pretty Orius beetle and the pugnacious lacewing larva.

Regional and controlled organic cultivation is close to our hearts. Our production facilities are located in Vienna & the surrounding area. So we can guarantee the shortest possible transport routes in production.

The packaging of our products is made of glass, paper or recyclable materials.
